# THE MARITIME EXHIBITION & CONFERENCE FOR BUSINESS OPPORTUNITIES WITH ASIA

Asia Pacific Maritime (APM) is a global nexus where **Shipbuilding & Marine, Workboat, Offshore, Port Technology, Hybrid & Electric** communities converge. Happening every even year, APM is the industry's chosen platform to connect and foster impactful collaborations.

After 35+ years, APM has become an essential part of the global maritime trade calendar and is the pre-eminent event in Asia. The last edition in 2024 welcomed over 15,717 industry professionals from Asia and 710 global exhibitors.

# **APM 2024 KEY NUMBERS**

15,717 attendees from Asia
6 exhibition halls
710 exhibitors
18 official pavilions

# **TOP VISITING COUNTRIES/ REGIONS**

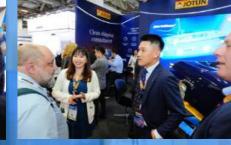

# WHO ATTENDS

VESSEL OWNERS

SHIPYARD

**MAKERS & MANUFACTURERS** 

MARITIME ICT

**INDUSTRY FORWARD THINKERS** 

**DECISION MAKERS & END-USERS**

Exhibition halls in 2024

## **PRODUCT & SERVICE OFFERINGS**

- Shipbuilding/ Shipyard Industry
- Maritime Services
- Ship Fittings and Equipment
- Electrical Engineering/ Electronics
- Electric Motors/ Batteries/ Charges/ Control
- Energy Storage Solutions/ Fuel Cells Technology
- Electric & Hybrid Equipment/ Technology/ Solutions
- Electric Outboards/ Inboards
- Marine Fuels/ Natural Gas/ Alternative Fuels
- Automation Systems/ Solutions/ Technology
- Auxiliary Systems for Propulsion
- Maritime ICT & Digitalisation
- Prime Movers/ Propulsion Systems
- Tank Terminals and Storage

and many more...

# **OUTLOOK FOR DECARBONIZATION**

Shipping's decarbonization is underway slowly like a supertanker coming about, with promising rising orders for new ships able to run on lower carbon fuel options, but very few operating vessels doing so.

Collaboration is needed to ensure that future fuel supply, infrastructure, and investment decisions are appropriate. Decarbonization of shipping will come with significant costs, costs that cannot be absorbed by single stakeholders, being shipowners or governments.

'Smart' and digital systems on vessels and fleets offer high rewards through operational efficiencies. This includes Digitalisation that supports the switch to alternative fuels and the development of autonomous vessels.

A shipowner navigating uncharted waters should consider all available decarbonization options. Key value chains are central to steering the maritime sector's decarbonization actions, as they affect other value chains and determine what is collectively achieved:

- the marine fuel value chain
- the shipbuilding value chain
- the maritime operations value chain

# SINGAPORE'S MOMENTUM FOR FUTURE GROWTH

As a leading International Maritime Centre, Maritime Singapore is home to a diverse range of maritime businesses, with more than 170 international shipping groups as well as other maritime players in the areas of finance, insurance, cybersecurity, shipbroking, law and arbitration.

Singapore remained a favoured location for bunkers and has made progress in supplying alternative fuels, such as biofuels, to support maritime decarbonisation.

Singapore has announced a Green and Digital Shipping Corridors (GDSC) collaboration with the Port of Rotterdam to establish the world's longest green and digital shipping corridor, and is working with the Port of Los Angeles, the Port of Long Beach, and C40 Cities towards a corridor between Singapore and the San Pedro Bay port complex

# **APM 2026: NEW FOCUS**

### **1) HYBRID & ELECTRIC**

Electric shipping and hybrid ships are important solutions now that the marine industry has entered a new era – the age of decarbonisation and strict regulation. Vessels must be future proof: flexible enough to adapt to the changing needs in the future. **Electric shipping or ship electrification is one of the key solutions for marine decarbonisation.** 

As the industry set on the course for net zero, APM 2026 Exhibition & Conference will spotlight on the following topics:

- Hybrid mechanical propulsion
- Shore power solution
- Ship electrification
- Shaft generator systems
- Hybrid marine system (vessel battery)

### **2) PORT TECHNOLOGY**

Today's smart ports and terminals are adopting new technologies remote operations, autonomous systems, and integrated information and communications platforms — to better track and monitor ships and expedite deliveries, warehousing, and customs. The goal is to increase productivity and enhance the client experience.

New feature at APM 2026 Exhibition & Conference

- Drones
- Advanced digital infrastructure
- Autonomous operations
- Innovative technologies

# **APM 2026: NEW FOCUS**

### **3) DECARBONISATION SOLUTIONS**

The International Maritime Organization (IMO) has put regulations in place to drive the needs to transform shipping industry into a form of green transport.

At APM 2026, conversations on decarbonisation in shipping, technology to drive decarbonisation and decarbonising strategies will be highlighted as the industry set on the course to achieve net-zero by 2050.

Decarbonisation innovations and solutions will be amplified through technical stage and PR activities to drive awareness and interests

- modern, multi-fuel engines, complete with fuel handling systems
- energy-saving propulsion systems
- energy-saving technologies
- electric solutions such as hybrid, shore power, shaft generators.
